Configuring and Troubleshooting Windows Server 2008 Terminal Services

Objectif

This two-day instructor-led course provides students with the knowledge and skills to configure, manage, monitor, and troubleshoot a Terminal Services (TS) environment. The course focuses on configuring of TS core functionality, licensing, Gateway, and Web Access.
This is the second course in the Windows Application Platform Services Technology Specialists Who Use Windows Server 2008 curriculum and will introduce the students to the Windows 2008 Terminal Services.

Aperçu du contenu

- Configuring Terminal Services Core Functionality
- Configuring and Managing Terminal Services Licensing
- Configuring and Troubleshooting Terminal Services Connections
- Configuring Terminal Services Resources
- Configuring Terminal Services Web Access
- Configuring Session Broker
- Configuring and Troubleshooting Terminal Services Gateway
- Managing and Monitoring Terminal Services

Comportement visé

After completing this course, students will be able to:

- Install and configure the TS role
- Configure TS settings
- Identify the appropriate licensing scope and configure forest, domain, and workgroup licensing
- Identify when to use the per-user and per-device licensing modes
- Install the TS Licensing Role
- Configure TS licensing for per-user and device licenses
- Manage the licensing lifecycle
- Configure TS connection properties using TS console and Group Policy
- Troubleshoot TS connection properties for a single user and multiple users
- Identify the considerations for the types of applications that can be installed in a TS environment
- Install applications on TS
- Configure TS Web Access to make TS RemoteApp programs available through a Web site
- Configure TS Easy Print
- Install and configure TS Web Access role service
- Configure a TS session broker for a load-balanced TS farm
- Configure TS Gateway properties
- Monitor active connections using TS Gateway console
- Troubleshoot a TS Gateway connectivity issue
- Manage TS connections to ensure availability of the TS
- Resolve client connectivity issues by verifying end-user configuration using Remote Desktop Connection (RDC)
- Monitor TS connections to determine when to force client disconnect
- Identify monitoring methods for TS services role
- Configure resource allocation policies using WSRM based on the environment
- Monitor WSRM performance using the WSRM Monitoring TS tool
